

## STRONGLY RECOMMENDED

Recommended in kitchen,  
hallways & bedrooms

Independently tested to provide  
effective fire suppression in  
at least a 16'x16' area.

## 10 YEAR PROTECTION

Left alone, the HAVEN can protect  
your loved ones and your valuables  
for 10 years (not including battery  
replacement for testing purposes).

## EASY 5<sup>MIN</sup> INSTALLATION IN CEILING

Installation couldn't be simpler. A 5<sup>3</sup>/<sub>4</sub>"  
hole can be cut with a regular handheld  
keyhole saw, and the HAVEN slides  
easily into this hole between floor joists.

## NO WATER DAMAGE

Unlike water suppression,  
the dry-chem agent in the HAVEN  
doesn't cause extensive damage when  
discharged.

## EASY CLEAN UP

The super-fine ABC dry-chem agent  
inside the HAVEN cleans up easily  
with a vacuum in the event of a  
discharge.

## -45°C

### OPERATES UNDER EXTREME COLD

Since cold temperatures don't affect  
performance, the HAVEN is perfect  
for use in outbuildings of all kinds  
(no power is required either).

## 135°F

### HEAT ACTIVATED

The heat-activated trigger means the  
HAVEN will not discharge in the presence  
of smoke. It must be extremely hot  
(i.e. a real fire) in order for the unit to  
automatically discharge.

## NO PLUMBING REQUIRED

Operating independently, the HAVEN can be  
placed virtually anywhere added protection  
is needed, without expensive plumbing or  
installation costs.

## NON-TOXIC ENVIRONMENTALLY SAFE POWDER

The dry-chem agent used in the  
HAVEN is safe when discharged,  
as it is essentially a form of  
baking soda.

## ONE YEAR

One year limited warranty
